

# T7 - Project Specifications

T-ESP-700

## Define your project specifications

- [illegible]

The latter **defines** and **clarifies** the needs (*both functional and non-functional*) and the constraints, related to the project.

**EPITECH.**

As you probably already know: a project for 6 is hard to develop and to maintain when there are just two of you! That means, there is too much projects and/or not enough people: **a selection process will occur!**

Your second step is to make a **short pitch video** (2-3 min), presenting your project. It will be a precious tool for the elections that follow, and it will represent your project during the campaigns.

All the students will be asked to evaluate some of the projects, then a **majority judgment** method will be applied

Eventually, 33% of the projects will be kept and lead by their *Promoters*. The other projects will be cancelled, leaving 67% of the people free to hire as *Partners*.

Like IRL, a recruitment process will take place. *Promoters* must recruit workforce to build a team that gets the job done. *Partners* must apply to join a project that meets their interests.

An algorithmic activity may help you with that!

## DELIVERIES

---

You are expected to deliver, **in the activity Project**, a zip-file containing the following:

- a file with 50 words (.md) - Short description of you project !
- a document that lays out user needs (.pdf) - How users will use the future (and best) solution.
- a specifications and requirements document (.pdf) - What the solution will do EXACTLY and unitarily.

This delivery shall weight less than 10 MB.

You are expected to deliver, **in the activity Group matcher**, some answers:

- describe the working criteria that suit you best

Remain fair & honest.  
Under-estimation as over-selling might lead you to uncomfortable situations

You are expected to deliver, **in the activity Video teasing**, the following file:

- a video pitch (~2 minutes) (.avi or .mp4)

This delivery shall weight less than 100 MB.
